Language

This is a reference of the core C++ language constructs.

Basic concepts

Keywords

Expressions

Declarations

Initialization

Functions

Statements

Classes

Templates

Exceptions

Basic Concepts

Here's a basic example of C++ code:

```
int main() {
    std::cout << "Hello, World!" << std::endl;
    return 0;
}</pre>
```

Data Types

Fundamental Types

C++ provides several fundamental data types...

```
int number = 42;
double pi = 3.14159;
bool flag = true;
char letter = 'A';
```

Appendix A: Vocabulary

Common Terms

• **Pointer**: A variable that stores the memory address...

• Reference: An alias for an existing variable...

• Constructor: A special member function...
